

DEEPAK YARRAMSETTI

Java Full Stack Developer

Bangalore, Karnataka, India | +91 88979 59445 | deepakyarramsetti88@gmail.com | [linkedin.com/in/deepakyarramsetti](https://www.linkedin.com/in/deepakyarramsetti) | github.com/deepakyarramsetti

PROFESSIONAL SUMMARY

Java Full Stack Developer with 2 years of experience designing and delivering production-ready web applications using Java, Spring Boot, Angular, React, and Microservices. Skilled in Object-Oriented Programming (OOP), Java 8 features (Streams, Lambda, Optional), Exception Handling, Collections Framework, and Multithreading. Shipped two end-to-end platforms covering REST API design, Spring Security (JWT), CI/CD pipelines, Dockerized deployment, and automated testing with JUnit and Mockito. Follows SOLID principles and Agile/Scrum delivery. Seeking roles at product-focused, service-based, or remote-first companies to build scalable, high-performance backend systems.

WORK EXPERIENCE

Krishnamurthy Software Solution (KMSS) | Software Engineer | Sep 2024 – Present

Project 1: Gatrix Timesheet — AI-Powered Workforce & Time Management

AI-powered workforce management platform built with Spring Boot and Angular — handling time tracking, manager approvals, payroll integration, and AI-driven productivity insights.

- **Designed and developed 15+ RESTful APIs** using Spring Boot and Spring MVC for timesheet submission, multi-level approval workflows, and project-based reporting — reducing manager processing time by an estimated ~40%.
- **Architected role-based access control (RBAC)** using Spring Security with JWT authentication for employees, managers, and admins — securing all API endpoints with fine-grained authorization.
- Integrated Spring Data JPA and Hibernate ORM with PostgreSQL for efficient data persistence; applied Spring Validation for server-side input validation and pagination for large dataset handling.
- Built dynamic, responsive Angular UI components for timesheet entry, manager dashboards, and custom report generation, improving overall user experience across all device sizes.
- Developed payroll integration module that auto-calculates approved work hours and generates payroll summaries, eliminating manual payroll computation for HR teams.
- **Delivered AI-based predictive timesheet auto-fill feature** reducing average manual data entry time by ~60% and improving submission accuracy across the platform.
- Containerized the application using Docker; managed build lifecycle and dependency management using Maven; implemented CI/CD pipeline using Jenkins for automated builds and deployments.
- **Achieved ~80% unit test coverage** for backend services using JUnit and Mockito; maintained Angular component reliability with Jasmine and Karma test suites.
- Managed source code versioning using Git and GitHub; followed Agile/Scrum methodology with sprint-based delivery, daily standups, and code reviews.

Project 2: Pioneer Coders — Full-Stack Recruitment & Interview Management Platform

Full-stack recruitment platform connecting students and hiring managers — supporting job posting, interview scheduling, AI-generated transcripts, quiz assessments, and Razorpay payment integration.

- **Engineered and exposed 20+ RESTful APIs** using Spring Boot for job creation, candidate onboarding, interview slot management, and session lifecycle — handling 3 user roles: students, interview managers, and platform admins.
- Configured Spring Security with JWT-based authentication and role-based authorization; applied OOP principles and Design Patterns (MVC Architecture) for maintainable, scalable code structure.
- **Shipped real-time quiz assessment engine** with dynamic question loading, timer-based submissions, and automated score evaluation — delivering instant results to candidates.
- **Integrated Razorpay payment gateway** for premium subscription purchases with automated order confirmation emails via JavaMail — end-to-end payment flow supporting platform monetization.
- Designed and implemented interview scheduling module with calendar-based slot booking, conflict detection, and automated email reminders, reducing scheduling errors and no-shows.
- **Optimized PostgreSQL schema with Hibernate ORM** — implemented indexed queries, custom JPQL, and pagination improving query performance by ~35% on large candidate datasets.
- Built fully responsive Angular frontend with reusable component architecture, lazy loading, and route-based access guards; achieved consistent UI/UX across all modules.

KEY HIGHLIGHTS

- **Built & deployed 2 full-stack production platforms** end-to-end within 1 year — an AI-powered workforce management system and a recruitment platform with payment integration.
- **Designed 35+ RESTful APIs** across both projects using Spring Boot — handling multi-role authentication, real-time data, and third-party integrations.
- **Achieved ~80% test coverage** with JUnit and Mockito; implemented CI/CD pipeline using Jenkins and Docker — reducing manual deployment effort significantly.

Autoliv India Pvt. Ltd (Fortune 500 MNC) | Java Full Stack Intern | Feb 2024 – Aug 2024

- **Engineered full-stack features** for enterprise-grade internal tools within the GTSC Engineering division — owning end-to-end delivery from Spring Boot REST APIs to Angular and React UI components.
- **Designed and delivered RESTful APIs** using Spring Boot handling real business workflows; validated all endpoints via Postman and managed relational data with PostgreSQL and SQL across multiple service modules.
- **Built production-quality responsive UI components** using Angular and React with TypeScript, achieving consistent cross-browser performance and meeting Autoliv's internal UX standards.
- **Collaborated with senior engineers in Agile/Scrum sprints** — contributed to code reviews, sprint planning, and retrospectives, delivering all features on schedule across the 6-month engagement.
- **Gained production-level experience** at a Fortune 500 MNC — working with enterprise codebases, JDBC, Git-based version control workflows, and team-standard tooling (IntelliJ IDEA, Postman, VS Code).

TECHNICAL SKILLS

Languages:	Java (Core Java, Java 8), JavaScript, TypeScript, SQL
Core Java:	OOP, Exception Handling, Collections Framework, Multithreading, Streams, Lambda, JDBC
Frameworks:	Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Angular, React.js
APIs & Arch:	RESTful APIs, Microservices, MVC Architecture, JWT Authentication, RBAC, Design Patterns
Databases:	PostgreSQL, MySQL
Tools & DevOps:	Docker, Maven, Git, GitHub, Jenkins, CI/CD, AWS (Basic), Postman, IntelliJ IDEA, VS Code
Testing:	JUnit, Mockito, Jasmine, Karma
Methodology:	Agile/Scrum, Sprint Planning, Code Reviews, Daily Standups, Problem Solving

EDUCATION

Course	Institution	Year	CGPA / %
B. Tech (Mechanical Engineering)	Gudlavalleru Engineering College	2024	7.70
Class XII	Tirumala Junior Kalasala	2020	9.11
Class X	S.P.H.H.M High School	2018	9.5

CERTIFICATIONS

- Front-End Development — Simplilearn (HTML, CSS, JavaScript, Responsive Web Design)
- Oracle Certified Associate, Java SE 8 Programmer (1Z0-808) — Recommended / In Progress
- AWS Cloud Practitioner (CLF-C02) — Recommended / In Progress
